```
{“status” : “false”, “description” : “An error has occurred while saving the  
data to the database”, “username” : ”AKB48”}
```

Other attributes

## Server Status API

API description	url	Method	Parameters	Actual parameters	Returned value	Actual returned values
<b>Check server connection</b>	/test/serverConnection	GET			<b>JSON</b>	<b>PSDF</b>
<b>Check connection between API server and database server</b>	/test/databaseServerConnection	GET			<b>JSON</b>	<b>PSDF</b>
<b>Test sending parameter to API server</b>	/test/passParameter	GET/POST	<b>String</b> param	<b>String</b> param	<b>JSON</b>	<b>String</b> param + <b>PSDF</b>
<b>Test querying data from database server to API server</b>	/test/queryingData	GET			<b>JSON</b>	<b>String</b> data + <b>PSDF</b>

## User API

API description	url	Method	Parameters	Actual parameters	Returned value	Actual returned values
Find user by an id	/user/findByID	POST	int id	int id	JSON	User + PSDF
Find user by condition	/user /findByWhere	POST	String columnName, operator, value	String columnName, operator, value	JSON	User[] users + PSDF
Find user by ranking	/user /findByRank	POST	String startRank, endRank	String startRank, endRank	JSON	User[] users + PSDF
Get all users	/user /getAllUsers	GET			JSON	User[] users + PSDF
Create new user	/user /createUser	POST	String JSON	User user	JSON	User user + PSDF
Update or change user's fields	/user /updateUser	POST	String JSON	User user	JSON	PSDF
Change user's password	/user /changePassword	POST	String JSON	User user String oldPassword, newPassword, confirmPassword	JSON	PSDF
Delete a user	/user/delete	POST	String JSON	User user	JSON	PSDF
Count every user in database	/user /countAllUsers	GET			JSON	User[] users + PSDF
Check user's rank	/user /getUserRank	POST	String JSON	User user	String	int

API description	url	Method	Parameters	Actual parameters	Returned value	Actual returned values
<b>Increase user's score</b>	/user/increaseScore	POST	<b>String</b> JSON	<b>User</b> user <b>int</b> score <b>String</b> description	<b>String</b> JSON	<b>PSDF</b>
<b>Decrease user's score with description</b>	/user/decreaseScore	POST	<b>String</b> JSON	<b>User</b> user <b>int</b> score <b>String</b> description	<b>String</b> JSON	<b>PSDF</b>
<b>Reset user's score</b>	/user/resetScore	POST	<b>String</b> JSON	<b>User</b> user	<b>String</b> JSON	<b>PSDF</b>
<b>login</b>	/user/login	POST	<b>String</b> userName, password	<b>String</b> userName, password	<b>String</b> JSON	<b>User</b> user + <b>PSDF</b>
<b>Create progress log</b>	/userProgress/createLog	POST	<b>String</b> JSON	<b>User</b> user <b>UserActivityProgress</b> activityProgress	<b>String</b> JSON	<b>PSDF</b>
<b>Get progress log by user</b>	/userProgress/getByUser	POST	<b>String</b> JSON	<b>User</b> user	<b>String</b> JSON	<b>UserActivityProgress</b> progress + <b>PSDF</b>
<b>Update progress to database</b>	/userProgress/update	POST	<b>String</b> JSON	<b>User</b> user <b>UserActivityProgress</b> activityProgress	<b>String</b> JSON	<b>PSDF</b>

## Group API

API description	url	Method	Parameters	Actual parameters	Returned value	Actual returned values
Find group by an id	/group/findById	POST	int id	int id	String JSON	Group + PSDF
Find group by condition	/group /findByWhere	POST	String columnName, operator, value	String columnName, operator, value	String JSON	Group[] groups + PSDF
Find group by ranking	/group /findByRank	POST	String startRank, endRank	String startRank, endRank	String JSON	Group[] groups + PSDF
Get all group	/group /getAllGroups	GET			String JSON	Group[] groups + PSDF
Create new group	/group /createGroup	POST	String JSON	Group group	String JSON	PSDF
Update or change group's fields	/group /updateGroup	POST	String JSON	Group group	String JSON	PSDF
Delete a group	/group/delete	POST	String JSON	Group group	String JSON	PSDF
Check group's rank	/group /getGroupRank	POST	String JSON	Group group	String JSON	int
Increase group's score	/group /increaseScore	POST	String JSON	Group group int score String description	String JSON	PSDF
Decrease group's score with description	/group /decreaseScore	POST	String JSON	Group group int score String description	String JSON	PSDF
Reset group's score	/group/resetScore	POST	String JSON	Group group	String JSON	PSDF

API description	url	Method	Parameters	Actual parameters	Returned value	Actual returned values
<b>Delete a member</b>	/group /deleteMember	POST	String JSON	<b>Group</b> group <b>User</b> member	<b>String</b> JSON	<b>PSDF</b>
<b>Add a member</b>	/group / addMember	POST	String JSON	<b>Group</b> group <b>User</b> member	<b>String</b> JSON	<b>PSDF</b>
<b>Create progress log</b>	/userProgress/cr eateLog	POST	String JSON	<b>Group</b> user <b>GroupActivityProgr</b> <b>ess</b> activityProgress	<b>String</b> JSON	<b>PSDF</b>
<b>Get progress log by group</b>	/groupProgress/ getByGroup	POST	String JSON	<b>Group</b> group	<b>String</b> JSON	<b>GroupActivityPr</b> <b>ogress</b> progress + <b>PSDF</b>
<b>Update progress to database</b>	/groupProgress/ update	POST	String JSON	<b>Group</b> group <b>GroupActivityProgr</b> <b>ess</b> activityProgress	<b>String</b> JSON	<b>PSDF</b>

## Event API

API description	url	Method	Parameters	Actual parameters	Returned value	Actual returned values
<b>Get activity event</b>	/event/getEvent	GET			<b>String</b> JSON	<b>Date</b> time + <b>Posture[]</b> postures
